Working With Public Service Solar

Public Service Solar's process is simple and pressure free.

There's no high pressure sales tactics here. Starting with a free estimate and site survey, we work together to ensure your solar energy system is properly designed for your home to maximize energy production and save you money for years to come.

01 | We Educate

02 | We Survey And Confirm

03 | We Plan

04 | We Install

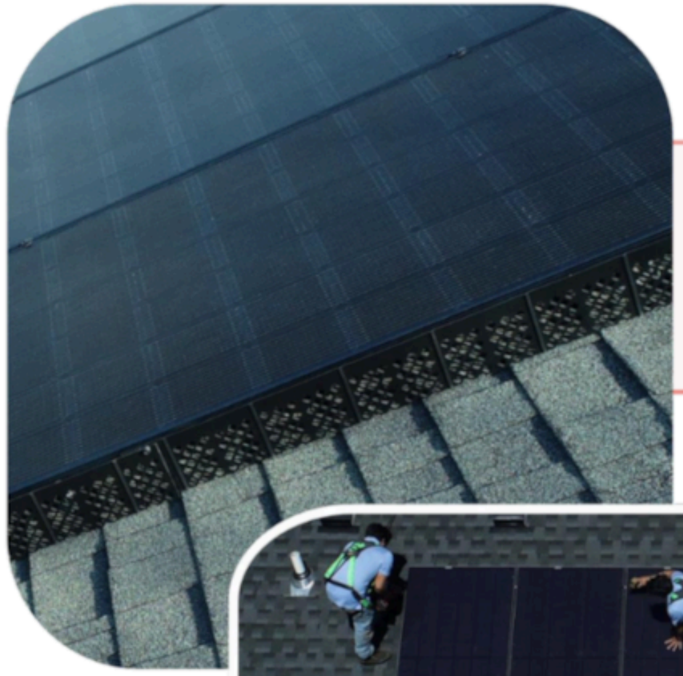

05 | We Support

The Public Service Solar Difference

Public Service Solar is leading the way with solar done right.

Expert installations with components built to last
Rest easy knowing your home solar system will be producing the energy you need for years to come, thanks to our premium products and **Lifetime Workmanship & Roof Penetration Warranty.**

Wire guards always included.

Solar Incentives

The Double Play of Going Solar

Between energy certificates, and net metering, Public Service Solar will guide you on how to take advantage of these incentives and make your solar investment cash flow positive with long term savings. Our financing options ensure that all home solar incentives always stay with you– the homeowner. We even set up your SREC account for you, complimentary.

SRECs

Also known as Solar Renewable Energy Certificates, SRECs are redeemable cash credits issued each time a solar array produces 1,000 kWh (1 MWh) of solar electricity. This is different from getting paid for the power you don’t use, but an extra credit designed to promote the adoption of renewable energy.

Net Metering

A billing mechanism which allows a solar producer to pay the "net" of their energy usage each month (ie the difference between what was put into the grid and what was pulled from the grid). This function affords the ability to be connected to both grid power and your own solar array and is what results in a reduced electric bill with solar.

As the purchaser and owner of a solar photovoltaic system, you may be eligible for various federal, state, local, or other rebates, tax credits, or incentives (collectively referred to as "Incentives"). If you have any questions regarding your eligibility, timing, or the amount of such Incentives, please consult your personal tax or financial advisor. Public Service Solar, LLC does not make any representation, warranty, or guarantee regarding the availability or amount of these Incentives.

About Us

Since 2018, Public Service Solar has been an industry leader for full-service solar and roofing installations. With our status as a Panasonic Platinum Elite Partner and GAF Master Elite Roofer, we ensure excellence from start to finish. Our dedicated team manages every aspect of your project, from initial design to installation, all under one roof. Specializing in sleek installations, we prioritize aesthetics and functionality. Additionally, we offer a comprehensive range of solutions, including EV chargers and battery storage, to meet all your energy needs. Backed by a 25-year product warranty and lifetime workmanship warranty, we provide peace of mind for your investment. Experience best in class service and craftsmanship with us.

Nominal frequency	60 Hz	60 Hz
CEC weighted efficiency	96.5%	97.0%
Maximum input DC voltage	79.5 V	60 V
MPPT voltage range	43–60 V	29.5–45 V
Maximum module I_{sc}	13 A	20 A
Ambient temperature range	–40°C to 65°C (–40°F to 149°F)	

[1] IQ8 Series Microinverters can be added to existing IQ7 systems on the same IQ Gateway only in the following grid-tied configurations: Solar Only or Solar + Battery (IQ Battery 3T/10T and IQ Battery 5P) without backup.
[2] IQ7 Series Microinverters cannot be added to a site with existing IQ8 Series Microinverters on the same gateway. Mixed system of IQ7 and IQ8 will not support IQ8-specific PCS features and grid-forming capabilities.
[3] IQ Microinverters ship with default settings that meet North America's IEEE 1547 interconnection standard requirements. Region-specific adjustments may be requested by an Authority Having Jurisdiction (AHJ) or utility representative, according to the IEEE 1547 interconnection standard. An IQ Gateway is required to make these changes during installation.
[4] Meets UL 1741 only when installed with IQ System Controller 2 or 3.

Simple

- Lightweight and compact with plug-and-play connectors
- Power line communication (PLC) between components
- Faster installation with simple two-wire cabling

Reliable

- Produces power even when the grid is down[4]
- More than one million cumulative hours of testing
- Industry-leading limited warranty of up to 25 years
- Class II double-insulated enclosure
- Optimized for the latest high-powered PV modules

Microgrid-forming

- Complies with the latest advanced grid support
- Remote automatic updates for the latest grid requirements
- Configurable to support a wide range of grid profiles
- Meets CA Rule 21 (UL 1741-SA) and IEEE 1547:2018 (UL 1741-SB 3rd Ed.)
